PROFESSIONAL EXPERIENCE

Software Developer Intern
Notionmind | Ahmedabad

- Designed and implemented Support Vector Machine (SVM) and k-Nearest Neighbors (k-NN) classifiers entirely from scratch using core Python, avoiding high-level ML libraries to deepen algorithmic understanding.
- Developed custom distance metric functions (Euclidean, Manhattan) and applied the Elbow Method to determine the ideal k in the k-NN algorithm for improved classification accuracy.
- Optimized both models for computational efficiency, ensuring correctness through rigorous unit testing and performance validation.
- Built a time-based S&p500 stock price prediction pipeline, splitting data using an 80/20 chronological split to respect real-world time-series constraints.

Data Science and Machine Learning Intern

BrainyBeam Technologies Pvt. Ltd. | Ahmedabad

- Write unit tests and validation scripts to ensure the correctness and reliability of code.
- Handle file operations, string processing, and exception handling for real-world data processing tasks.
- Develop and maintain scripts and applications using core Python, emphasizing clean, readable, and efficient code.
- Collaborate with team members to design and implement core features using object-oriented programming principles.

EDUCATION

GUJARAT Technological university (GTU) | 2022- 2026

Bachelor in Computer Engineering (BE)

- CGPA: 7.50 / 10

CERTIFICATES

Artificial Intelligence /Machine Learning (AI/ML) with IoT, Deep Learning, and Computer Vision

Edunet Foundation | Sponsored by SAP

TensorFlow for Machine Learning – GeeksforGeeks

GeeksforGeeks

Data Analytics

Deloitte

Intel® AI

Intel Corporation India

MAJOR PROJECTS

Time-Based Stock Price Prediction for S&P500

- Built a time-series prediction pipeline using lag features and technical indicators, Decision Tree, and Random Forest models on S&P500 stock data.
- Evaluated model performance using MAE, MSE, RMSE, and R^2 ; performed hyperparameter tuning and visualized key feature importances to improve forecasting accuracy.

AI-Powered Expense Tracker (Flutter)

- Built an AI-powered expense tracker in Flutter with dynamic graphs for weekly, monthly, and yearly spending, along with insights on average and highest expenses.
- Integrated group-based expense management (Splitwise-style) and an AI assistant to guide users with saving habits and resolve money-related queries.

HACKATHONS

Innonova 24-Hour Hackathon, Indore

AI-Powered To-Do List App (Flutter)

- Developed a smart To-Do list app with NLP-based task categorization and intelligent priority management to enhance daily productivity.
- Integrated AI-generated reminders that adapt based on task urgency, deadlines, and user behavior patterns.
- Built an AI-powered note-taking app with automatic summarization, keyword extraction, and real-time smart suggestions for efficient content recall and organization.

DAIICT Hackathon (Dhirubhai Ambani Institute of Information and Communication Technology), Ahmedabad

AI-Powered Expense Tracker (Flutter)

- Engineered a feature-rich expense tracking app with AI-driven insights and interactive graphs for weekly, monthly, and yearly spending analysis.
- Implemented group-based expense management similar to Splitwise, enabling seamless splitting and tracking of shared expenses.
- Integrated an AI assistant to provide personalized saving tips and financial guidance based on user behavior and spending patterns.
